

Real time Adaptive Estimation

Sasanka Kuruppu Arachchige, Nicklas Fienda

Mentor: Gökhan Alcan, Azwirman Gusrialdi

The diagram consists of a dark gray background. On the left, there is a vertical rectangular box with rounded corners, which is mostly empty. A curved arrow originates from the right side of this box and points towards the left side of a larger box in the center. This central box is also dark gray with rounded corners and is divided into two horizontal sections by a thin white line. The top section is labeled 'Problem' in bold white text. The bottom section contains three lines of white text: 'Prior knowledge of the system dynamics', 'Difficulty to accurately model dynamics of complex systems', and 'Adaptability to system changes'. A curved arrow originates from the right side of the central box and points towards the right edge of the frame.

Problem

Prior knowledge of the system dynamics

**Difficulty to accurately model dynamics of
complex systems**

Adaptability to system changes

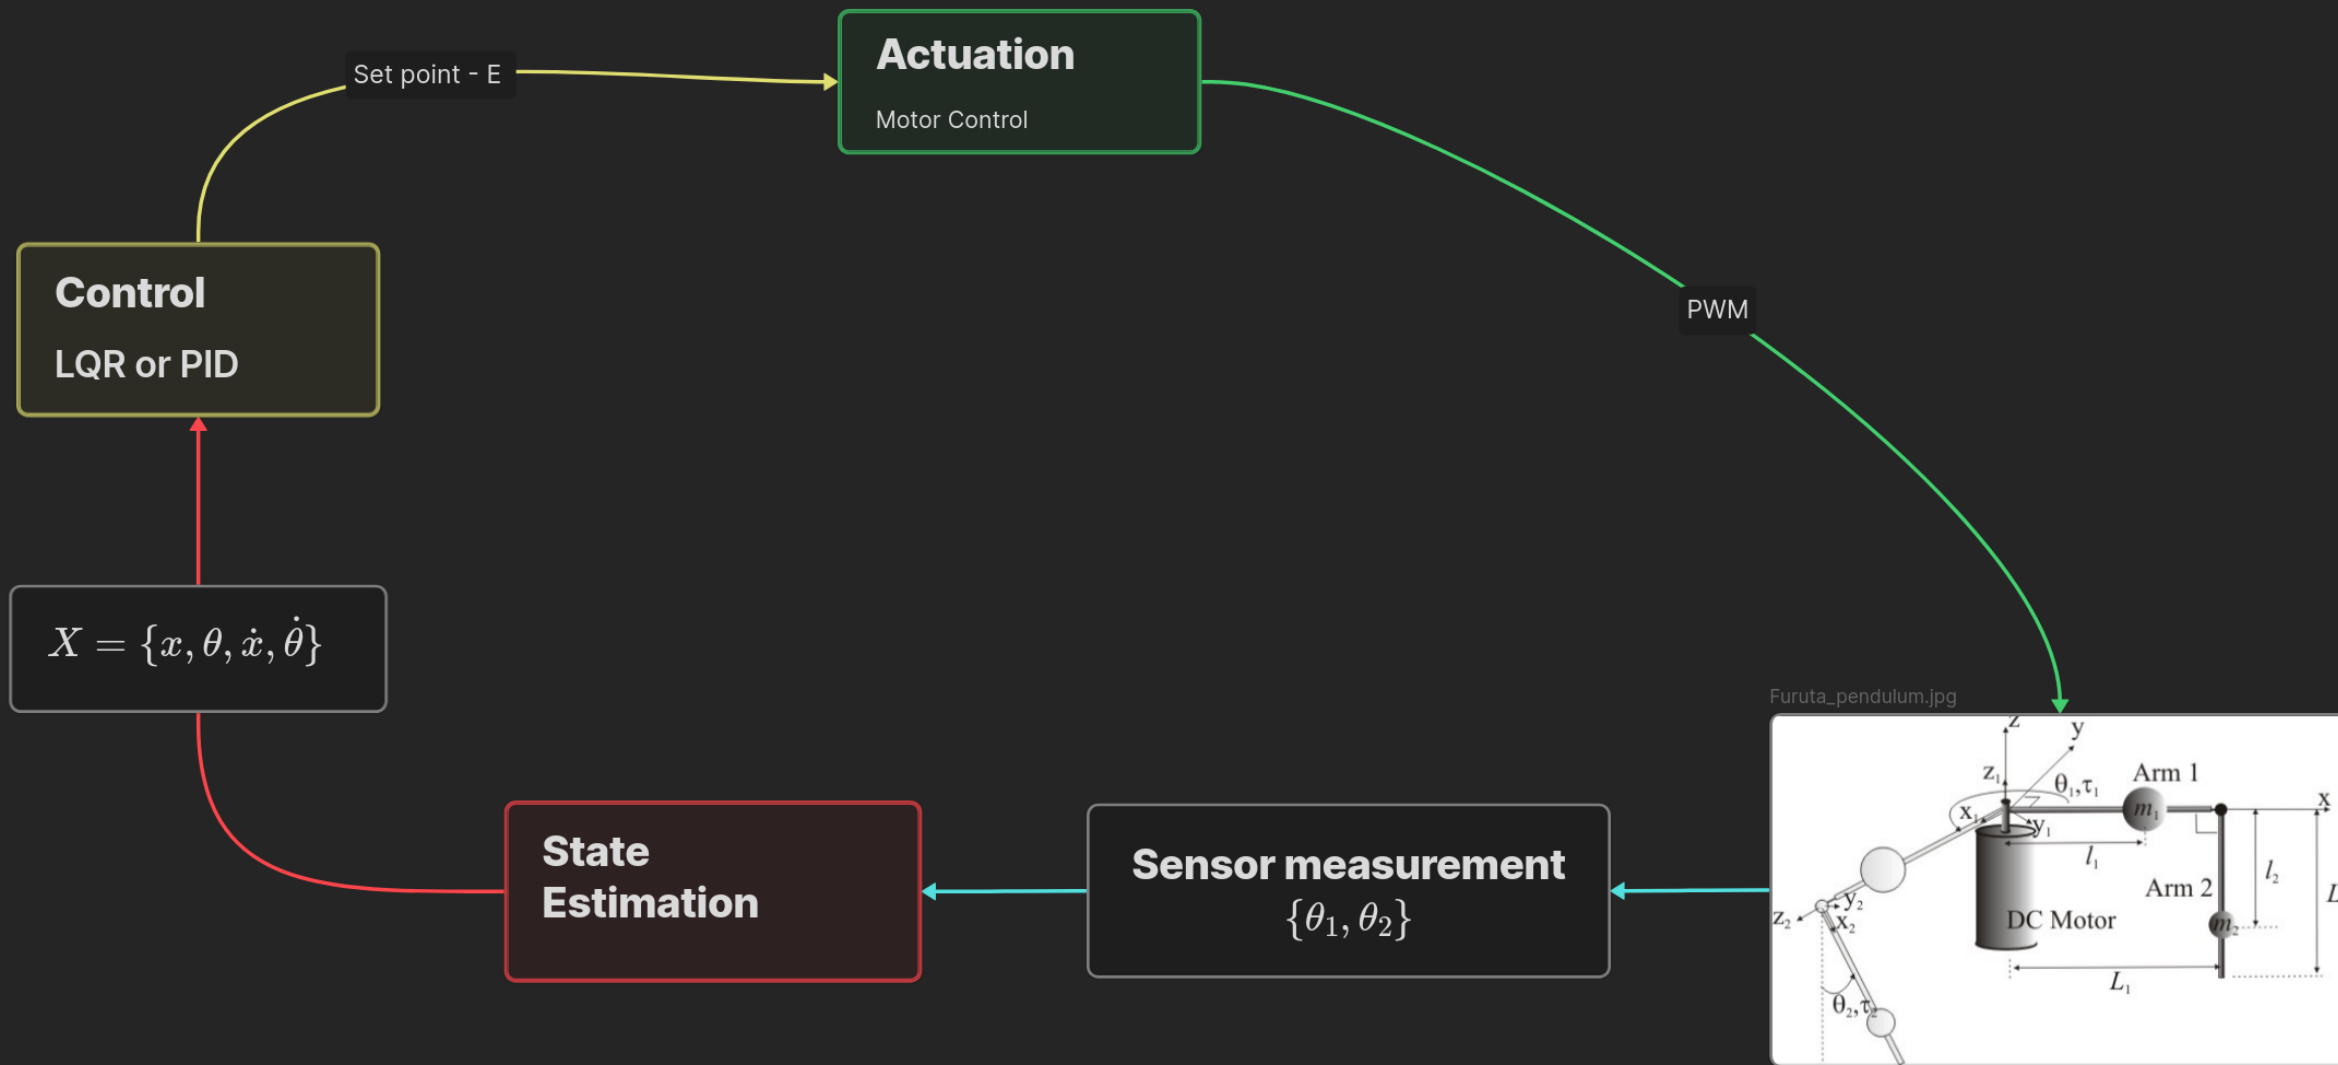

Proposal

Temporal Predictive Coding (tPC)

- Learns system dynamics and perform state estimation.
- Similar performance to Kalman filter.

Hypothesis

- Will adapt to changes in system dynamics

Goals

- To implement a tPC based adaptive estimator
- Deploy the system in Simulator and Real world hardware

Objectives

Phase 1 : Simulation

- Set up simulator in NVIDIA IsaacSIM [#Sasa](#)
- Replicate state estimation results of the paper.
 - KL as the baseline [#Sasa](#)
 - tPC [#Nick](#)
- Off the shelf control. PID, LQR etc. [#Sasa](#) , [#Nick](#)
- Evaluate systems adaptability with [#Sasa](#) , [#Nick](#)
 - Changes in the physical parameters (e.g. gravity).
 - Changes in the system dynamics (mass of pendulum).
 - Unseen external disturbances.
 - Novel sensing methods.

Phase 2 : Real world

- Construct the physical device [#Sasa](#) , [#Nick](#)
- Evaluate the adaptability to sim2real gap for both KF and tPC. [#Sasa](#) , [#Nick](#)

⊖ SWOT

Strengths

- Technical know-how
 - Electronics and hardware design
 - Robotics
 - Real time control system design
 - Learning based system expertise

Weaknesses

- tPC is a cutting edge learning based method which is yet to be established
- Time management

Opportunities

- Enables learning dynamics of complex systems
- Enables a plug and play estimation algorithms with minor/self tuning

Threats

- Sim-to-real gap
- Uncertainty of scaling to bigger systems

Thank you
